Rev. 9

## **CAUTION**

RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

It may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for proper disposal.

## **ATTENTION**

IL Y A UN RISQUE D'EXPLOSION SI LA BATTERIE EST REMPLACÉE PAR UN MODÈLE DE TYPE INCORRECT. METTRE AU REBUT LES BATTERIES UTILISÉES SELON LES INSTRUCTIONS DONNÉES.

Il peut être illégal de jeter les batteries dans des eaux d'égout municipales. Vérifiez avec les fonctionnaires municipaux de votre région pour les détails concernant des déchets solides et une mise au rebut appropriée.

# Safety precautions

---

This booklet provides safety warnings and precautions for our service personnel to ensure the safety of their customers, their machines as well as themselves during maintenance activities. Service personnel are advised to read this booklet carefully to familiarize themselves with the warnings and precautions described here before engaging in maintenance activities.

## Safety warnings and precautions

Various symbols are used to protect our service personnel and customers from physical danger and to prevent damage to their property. These symbols are described below:

 **DANGER:** High risk of serious bodily injury or death may result from insufficient attention to or incorrect compliance with warning messages using this symbol.

 **WARNING:** Serious bodily injury or death may result from insufficient attention to or incorrect compliance with warning messages using this symbol.

 **CAUTION:** Bodily injury or damage to property may result from insufficient attention to or incorrect compliance with warning messages using this symbol.

### Symbols

The triangle () symbol indicates a warning including danger and caution. The specific point of attention is shown inside the symbol.

General warning.

Warning of risk of electric shock.

Warning of high temperature.

 indicates a prohibited action. The specific prohibition is shown inside the symbol.

General prohibited action.

Disassembly prohibited.

 indicates that action is required. The specific action required is shown inside the symbol.

General action required.

Remove the power plug from the wall outlet.

Always ground the copier.

## 1. Installation Precautions

### WARNING

- Do not use a power supply with a voltage other than that specified. Avoid multiple connections to one outlet: they may cause fire or electric shock. When using an extension cable, always check that it is adequate for the rated current. ....
- Connect the ground wire to a suitable grounding point. Not grounding the copier may cause fire or electric shock. Connecting the earth wire to an object not approved for the purpose may cause explosion or electric shock. Never connect the ground cable to any of the following: gas pipes, lightning rods, ground cables for telephone lines and water pipes or faucets not approved by the proper authorities. ....

### CAUTION:

- Do not place the copier on an infirm or angled surface: the copier may tip over, causing injury. ....
- Do not install the copier in a humid or dusty place. This may cause fire or electric shock. ....
- Do not install the copier near a radiator, heater, other heat source or near flammable material.

This may cause fire. ....

- Allow sufficient space around the copier to allow the ventilation grills to keep the machine as cool as possible. Insufficient ventilation may cause heat buildup and poor copying performance. ....

- Always handle the machine by the correct locations when moving it. ....
- Always use anti-toppling and locking devices on copiers so equipped. Failure to do this may cause the copier to move unexpectedly or topple, leading to injury. ....
- Avoid inhaling toner or developer excessively. Protect the eyes. If toner or developer is accidentally ingested, drink a lot of water to dilute it in the stomach and obtain medical attention immediately. If it gets into the eyes, rinse immediately with copious amounts of water and obtain medical attention. ....

- Advise customers that they must always follow the safety warnings and precautions in the copier's instruction handbook. ....

## 2.Precautions for Maintenance

### WARNING

- Always remove the power plug from the wall outlet before starting machine disassembly. .... 
- Always follow the procedures for maintenance described in the service manual and other related brochures. .... 
- Under no circumstances attempt to bypass or disable safety features including safety mechanisms and protective circuits. .... 
- Always use parts having the correct specifications. .... 
- Always use the thermostat or thermal fuse specified in the service manual or other related brochure when replacing them. Using a piece of wire, for example, could lead to fire or other serious accident. .... 
- When the service manual or other serious brochure specifies a distance or gap for installation of a part, always use the correct scale and measure carefully. .... 
- Always check that the copier is correctly connected to an outlet with a ground connection. .... 
- Check that the power cable covering is free of damage. Check that the power plug is dust-free. If it is dirty, clean it to remove the risk of fire or electric shock. .... 
- Never attempt to disassemble the optical unit in machines using lasers. Leaking laser light may damage eyesight. .... 
- Handle the charger sections with care. They are charged to high potentials and may cause electric shock if handled improperly. .... 

### CAUTION

- Wear safe clothing. If wearing loose clothing or accessories such as ties, make sure they are safely secured so they will not be caught in rotating sections. .... 
- Use utmost caution when working on a powered machine. Keep away from chains and belts. .... 
- Handle the fixing section with care to avoid burns as it can be extremely hot. .... 
- Check that the fixing unit thermistor, heat and press rollers are clean. Dirt on them can cause abnormally high temperatures. .... 

• Do not remove the ozone filter, if any, from the copier except for routine replacement. ....

• Do not pull on the AC power cord or connector wires on high-voltage components when removing them; always hold the plug itself. ....

• Do not route the power cable where it may be stood on or trapped. If necessary, protect it with a cable cover or other appropriate item. ....

• Treat the ends of the wire carefully when installing a new charger wire to avoid electric leaks. ....

• Remove toner completely from electronic components. ....

• Run wire harnesses carefully so that wires will not be trapped or damaged. ....

• After maintenance, always check that all the parts, screws, connectors and wires that were removed, have been refitted correctly. Special attention should be paid to any forgotten connector, trapped wire and missing screws. ....

• Check that all the caution labels that should be present on the machine according to the instruction handbook are clean and not peeling. Replace with new ones if necessary. ....

• Handle greases and solvents with care by following the instructions below: ....

- Use only a small amount of solvent at a time, being careful not to spill. Wipe spills off completely.
- Ventilate the room well while using grease or solvents.
- Allow applied solvents to evaporate completely before refitting the covers or turning the power switch on.
- Always wash hands afterwards.

• Never dispose of toner or toner bottles in fire. Toner may cause sparks when exposed directly to fire in a furnace, etc. ....

• Should smoke be seen coming from the copier, remove the power plug from the wall outlet immediately. ....

### 3.Miscellaneous

#### WARNING

• Never attempt to heat the drum or expose it to any organic solvents such as alcohol, other than the specified refiner; it may generate toxic gas. ....

| 1-4-1 Paper misfeed detection .....                                                   | 1-4-1  |
| (1) Paper misfeed indication .....                                                    | 1-4-1  |
| (2) Paper misfeed detection conditions .....                                          | 1-4-2  |
| (3) Paper misfeeds .....                                                              | 1-4-11 |
| 1-4-2 Self-diagnosis .....                                                            | 1-4-22 |
| (1) Self-diagnostic function .....                                                    | 1-4-22 |
| (2) Self diagnostic codes .....                                                       | 1-4-23 |
| 1-4-3 Image formation problems .....                                                  | 1-4-44 |
| (1) No image appears (entirely white) .....                                           | 1-4-45 |
| (2) No image appears (entirely black) .....                                           | 1-4-45 |
| (3) Image is too light .....                                                          | 1-4-46 |
| (4) Background is visible .....                                                       | 1-4-46 |
| (5) A white line appears longitudinally .....                                         | 1-4-46 |
| (6) A black line appears longitudinally .....                                         | 1-4-47 |
| (7) A black line appears laterally .....                                              | 1-4-47 |
| (8) One side of the copy image is darker than the other .....                         | 1-4-47 |
| (9) Black dots appear on the image .....                                              | 1-4-47 |
| (10) Image is blurred .....                                                           | 1-4-48 |
| (11) The leading edge of the image is consistently misaligned with the original ..... | 1-4-48 |
| (12) The leading edge of the image is sporadically misaligned with the original ..... | 1-4-48 |
| (13) Paper creases .....                                                              | 1-4-48 |
| (14) Offset occurs .....                                                              | 1-4-49 |

|                                                                |        |
|----------------------------------------------------------------|--------|
| (15) Image is partly missing.....                              | 1-4-49 |
| (16) Fusing is poor.....                                       | 1-4-49 |
| (17) Image is out of focus.....                                | 1-4-49 |
| (18) Image center does not align with the original center..... | 1-4-50 |
| (19) Image is not square.....                                  | 1-4-50 |
| 1-4-4 Electric problems.....                                   | 1-4-51 |
| 1-4-5 Mechanical problems.....                                 | 1-4-55 |
| 1-4-6 Send error code.....                                     | 1-4-57 |
| (1) Scan to SMB error codes.....                               | 1-4-57 |
| (2) Scan to FTP error codes.....                               | 1-4-58 |
| (3) Scan to E-mail error codes.....                            | 1-4-59 |
| (4) Network Twain error codes.....                             | 1-4-60 |
| (5) Software trouble error codes.....                          | 1-4-60 |

## 1-5 Assembly and Disassembly

|                                                                                             |        |
|---------------------------------------------------------------------------------------------|--------|
| 1-5-1 Precautions for assembly and disassembly.....                                         | 1-5-1  |
| (1) Precautions.....                                                                        | 1-5-1  |
| (2) Drum.....                                                                               | 1-5-1  |
| (3) Toner.....                                                                              | 1-5-1  |
| (4) How to tell a genuine Kyocera Mita toner container.....                                 | 1-5-2  |
| 1-5-2 Paper feed section.....                                                               | 1-5-3  |
| (1) Detaching and refitting the forwarding, paper feed and separation pulleys.....          | 1-5-3  |
| (2) Detaching and refitting the MP separation, MP paper feed and MP forwarding pulleys..... | 1-5-5  |
| (3) Detaching and refitting the left and right registration cleaner.....                    | 1-5-10 |
| 1-5-3 Optical section.....                                                                  | 1-5-12 |
| (1) Detaching and refitting the exposure lamp.....                                          | 1-5-12 |
| (2) Detaching and refitting the scanner wires.....                                          | 1-5-14 |
| (3) Detaching and refitting the ISU (reference).....                                        | 1-5-19 |
| (4) Adjusting the position of the ISU (reference).....                                      | 1-5-21 |
| (5) Detaching and refitting the laser scanner unit.....                                     | 1-5-22 |
| (6) Adjusting the skew of the laser scanner unit (reference).....                           | 1-5-24 |
| 1-5-4 Drum section.....                                                                     | 1-5-25 |
| (1) Detaching and refitting the drum unit.....                                              | 1-5-25 |
| (2) Detaching and refitting the main charger unit.....                                      | 1-5-26 |
| (3) Detaching and refitting the drum separation claws.....                                  | 1-5-27 |
| 1-5-5 Developing section.....                                                               | 1-5-28 |
| (1) Detaching and refitting the developing unit.....                                        | 1-5-28 |
| 1-5-6 Transfer section.....                                                                 | 1-5-29 |
| (1) Detaching and refitting the transfer roller unit.....                                   | 1-5-29 |
| 1-5-7 Fuser section.....                                                                    | 1-5-30 |
| (1) Detaching and refitting the fuser unit.....                                             | 1-5-30 |
| (2) Detaching and refitting the heat roller separation claws.....                           | 1-5-31 |
| (3) Detaching and refitting the press roller.....                                           | 1-5-32 |
| (4) Detaching and refitting the fuser heater.....                                           | 1-5-33 |
| (5) Detaching and refitting the heat roller.....                                            | 1-5-34 |
| (6) Detaching and refitting the fuser unit thermistor 1 and 2.....                          | 1-5-35 |
| (7) Adjusting front position of the fuser unit (adjusting lateral squareness).....          | 1-5-36 |
| 1-5-8 Others.....                                                                           | 1-5-37 |
| (1) Detaching and refitting the ozone filter 1 and 2.....                                   | 1-5-37 |
| (2) Detaching and refitting the dust filter 1 and 2.....                                    | 1-5-38 |
| (3) Detaching and refitting the hard disk.....                                              | 1-5-39 |

## 1-6 Requirements on PWB Replacement

|                                                    |       |
|----------------------------------------------------|-------|
| 1-6-1 Upgrading the firmware.....                  | 1-6-1 |
| 1-6-2 Adjustment-free variable resistors (VR)..... | 1-6-1 |
| 1-6-3 Remarks on main PWB replacement.....         | 1-6-2 |
| 1-6-4 Remarks on engine PWB replacement.....       | 1-6-2 |
| 1-6-5 Remarks on scanner PWB replacement.....      | 1-6-3 |

**2-1 Mechanical construction**

|                                                      |        |
|------------------------------------------------------|--------|
| 2-1-1 Paper feed section .....                       | 2-1-1  |
| 2-1-2 Main charging section .....                    | 2-1-4  |
| 2-1-3 Optical section .....                          | 2-1-5  |
| (1) Original scanning.....                           | 2-1-6  |
| (2) Image printing.....                              | 2-1-7  |
| 2-1-4 Developing section.....                        | 2-1-10 |
| (1) Single component developing system.....          | 2-1-12 |
| 2-1-5 Transfer and separation sections.....          | 2-1-13 |
| 2-1-6 Cleaning and charge erasing sections.....      | 2-1-14 |
| 2-1-7 Fuser section .....                            | 2-1-15 |
| 2-1-8 Eject and switchback sections .....            | 2-1-16 |
| 2-1-9 Duplex section .....                           | 2-1-17 |
| (1) Paper conveying operation in duplex copying..... | 2-1-18 |

**2-2 Electrical Parts Layout**

|                                      |       |
|--------------------------------------|-------|
| 2-2-1 Electrical parts layout.....   | 2-2-1 |
| (1) PWBs .....                       | 2-2-1 |
| (2) Switches and sensors .....       | 2-2-2 |
| (3) Motors .....                     | 2-2-4 |
| (4) Other electrical components..... | 2-2-5 |

**2-3 Operation of the PWBs**

|                                     |        |
|-------------------------------------|--------|
| 2-3-1 Power source PWB.....         | 2-3-1  |
| 2-3-2 Engine PWB.....               | 2-3-5  |
| 2-3-3 Main operation unit PWB ..... | 2-3-13 |

**2-4 Appendixes**

|                                           |       |
|-------------------------------------------|-------|
| Maintenance parts list .....              | 2-4-1 |
| Maintenance kits .....                    | 2-4-2 |
| Periodic maintenance procedures .....     | 2-4-3 |
| Chart of image adjustment procedures..... | 2-4-7 |
| General wiring diagram.....               | 2-4-9 |

NOTE: These specifications are subject to change without notice.

## 1-1-2 Parts names

## (1) Machine

Figure 1-1-1

- |                                   |                                |                                  |
|-----------------------------------|--------------------------------|----------------------------------|
| 1. Original cover (Option)        | 13. Toner container            | 25. Paper width guides           |
| 2. Original size indicator plates | 14. Toner container stopper    | 26. Multi purpose tray           |
| 3. Clip holder                    | 15. Waste toner box            | 27. Memory card cover holder     |
| 4. Reception indicator            | 16. Green knob (A1)            | 28. Handles                      |
| 5. Error indicator                | 17. Paper feed unit (A2)       | 29. USB memory slot (A2)         |
| 6. Left cover 1                   | 18. Paper feed unit cover (A3) | 30. USB memory slot (A3)         |
| 7. Left cover 1 Lever             | 19. USB memory slot (A1)       | 31. Memory card slot             |
| 8. Left cover 2                   | 20. Front cover                | 32. USB interface connector      |
| 9. Platen                         | 21. Paper width adjusting tab  | 33. Network interface connector  |
| 10. Operation panel               | 22. Length adjustment plate    | 34. Parallel interface connector |
| 11. Cassette 1                    | 23. Top tray                   | 35. Option interface slot (OPT1) |
| 12. Cassette 2                    | 24. Main power switch          | 36. Option interface slot (OPT2) |

**(2) Operation panel****Figure 1-1-2**

- |                                    |                          |
|------------------------------------|--------------------------|
| 1. System menu key/indicator       | 13. Memory indicator     |
| 2. Status/Job cancel key/indicator | 14. Error indicator      |
| 3. Program key/indicator           | 15. Help key/indicator   |
| 4. Application key/indicator       | 16. Logout key/indicator |
| 5. Counter key/indicator           | 17. Power key            |
| 6. Copy key/indicator              | 18. Main power indicator |
| 7. Send key/indicator              | 19. Numeric keys         |
| 8. Document box key/indicator      | 20. Clear key            |
| 9. Accessibility key/indicator     | 21. Start key/indicator  |
| 10. Print indicator                | 22. Stop key             |
| 11. Send indicator                 | 23. Reset key            |
| 12. Receive indicator              |                          |

### 1-1-3 Machine cross section

**Figure 1-1-3 Machine cross section**

1. Paper feed section
2. Main charging section
3. Optical section
4. Developing section
5. Transfer and separation section
6. Cleaning and charge erasing section
7. Fuser section
8. Eject and switchback section
9. Duplex section

### 1-2-1 Installation environment

1. Temperature: 10 to 32.5°C/50 to 90.5°F
2. Humidity: 15 to 80%RH
3. Power supply: 120 V AC, 11.5 A  
220 to 240 V AC, 6.3 A
4. Power source frequency: 50 Hz  $\pm$  0.3%/60 Hz  $\pm$  0.3%
5. Installation location
 

Avoid direct sunlight or bright lighting. Ensure that the photoconductor will not be exposed to direct sunlight or other strong light when removing paper jams.

Avoid locations subject to high temperature and high humidity or low temperature and low humidity; an abrupt change in the environmental temperature; and cool or hot, direct air.

Avoid places subject to dust and vibrations.

Choose a surface capable of supporting the weight of the machine.

Place the machine on a level surface (maximum allowance inclination: 1°).

Avoid air-borne substances that may adversely affect the machine or degrade the photoconductor, such as mercury, acidic or alkaline vapors, inorganic gasses, NOx, SOx gases and chlorine-based organic solvents.

Select a well-ventilated location.
6. Allow sufficient access for proper operation and maintenance of the machine.  
Machine front: 1000 mm/39 3/8"    Machine rear: 100 mm/3 15/16"  
Machine right: 300 mm/11 13/16"    Machine left: 300 mm/11 13/16"

**Figure 1-2-1 Installation dimensions**

## 1-2-2 Unpacking and installation

### (1) Installation procedure

**Moving the machine**

When moving the machine, pull out the four handles on the right and left sides and hold them.

**Figure 1-2-2**

## Unpacking.

Figure 1-2-3 Unpacking

- |                           |                     |
|---------------------------|---------------------|
| 1. Machine                | 13. Hinge joints    |
| 2. Outer case             | 14. Bar code labels |
| 3. Inner frame            | 15. Power cord      |
| 4. Skid                   | 16. Fixing brackets |
| 5. Bottom front left pad  | 17. Plastic bag     |
| 6. Bottom front right pad | 18. Operation guide |
| 7. Bottom rear left pad   | 19. Plastic bag     |
| 8. Bottom rear right pad  | 20. Cursor pins     |
| 9. Machine cover          | 21. Stylus pen*     |
| 10. Upper pad             | 22. Penholder*      |
| 11. Spacer                |                     |
| 12. Document tray         |                     |

\*: Europe and Asia Pacific only.

Caution: Place the machine on a level surface.

Remove the tapes, spacers and pad.

1. Remove two tapes.
2. Pull the lever and operation section is lowered.
3. Remove two spacers.  
Remove waste textile on the operation panel, if any.
4. Remove the pad.

**Figure 1-2-4**

Install the optional paper feeder.

1. Install the optional paper feeder as necessary.
2. Verify levelness at the four corners of the platen using a level gauge, and adjust the level bolts at the bottom of the machine to optimize levelness.

Release the lever holding mirror 1 and 2 frames.

1. Turn the lever of the machine rear side with the tool to release the lever holding the mirror 1 and 2 frames.

**Figure 1-2-5**

### Release of cassette lift plate.

1. Pull cassette 1 and 2 out.  
Remove the lift plate stopper from each cassette and attach it to the storage location. When moving the machine, attach the lift plate in original position.

**Figure 1-2-6**

### Load paper.

1. Pull the cassette out.
2. Holding the paper width adjusting tab both ends, move the paper width guides to fit the paper size.

**Figure 1-2-7**

3. Adjust the length adjustment plate to fit the paper size.

**Figure 1-2-8**

4. Align the paper flush against the left side of the cassette.

**Figure 1-2-9**

Install the toner container.

1. Open the front cover.
2. Tap the top of the toner container five to six times.

**Figure 1-2-10**

3. Shake the toner container approximately 10 times in the horizontal direction to stir toner.

**Figure 1-2-11**

4. Gently push the toner container into the machine along the rails. Push the container all the way into the machine until it locks in place.

**Figure 1-2-12**

**Install the waste toner box.**

1. Install the waste toner box in the machine.
2. Close the front cover.

**Figure 1-2-13**

**Install the optional original cover or the DP.**

1. Install the optional original cover or DP.

**Install other optional devices.**

1. Install the optional devices (job separator, built-in finisher, document finisher and/or fax kit etc.) as necessary.

**Connect the power cord.**

1. Connect the power cord to the connector on the machine.
2. Insert the power plug into the wall outlet.

### Install the fixing brackets.

1. Remove two screws from the rear cover.
2. Hook the catch of fixing brackets onto the groove of round frame, and secure them using two screws removed before step.

**Figure 1-2-14**

### Install the stylus pen and penholder.

1. Attach the penholder and stylus pen to the machine as necessary.

**Figure 1-2-15**

### Carry out initial developer setting (maintenance item U130).

1. Turn the main power switch on and press the status key.
2. Enter the maintenance mode by entering 10871087 using the numeric keys.
3. Enter 130 using the numeric keys and press the start key.
4. Press the start key to execute the maintenance item. The drive stops within approximately 5 minutes.
5. Press the stop key.

Output an own-status report (maintenance item U000).

1. Enter 000 using the numeric keys and press the start key.
2. Select MAINTENANCE and press the start key to output a list of the current settings of the maintenance items.
3. Press the stop key.

Exit maintenance mode.

1. Enter 001 using the numeric keys and press the start key. The machine exits the maintenance mode.

Print out the user setting list.

1. Select [Report Print] to output the user various setting reports.

Make test copies.

1. Place an original and make test copies.

Attaching the language label (230 V specifications only).

1. According to need, attach the correspond language label.

Completion of the machine installation.

## (2) Setting initial copy modes

Factory settings are as follows:

| Maintenance item No. | Contents                                   | Factory setting |
|----------------------|--------------------------------------------|-----------------|
| U253                 | Switching between double and single counts | Double count    |
| U260                 | Selecting the timing for copy counting     | After ejection  |
| U285                 | Setting service status page                | ON              |
| U326                 | Setting the black line cleaning indication | ON              |
| U328                 | Side ejection setting                      | OFF             |
| U342                 | Setting the ejection restriction           | ON              |
| U343                 | Switching between duplex/simplex copy mode | OFF             |

### 1-2-3 Installing the key counter (option)

Installing the key counter requires the following component:

Key counter (P/N 3025418011)

Key counter set (P/N 302A369708)

#### Supplied parts of key counter set:

Key counter socket assembly (P/N 3029236241)

Key counter cover (P/N 3066060011)

Key counter mount (P/N 3066060041)

Key counter retainer (P/N 302GR03020)

Key counter cover retainer (P/N 302GR03010)

One (1) M3 × 8 tap-tight P screw (P/N 5MBTPB3008PW++R)

Two (2) M4 × 10 tap-tight P screws (P/N 5MBTPB4010PW++R)

Two (2) M4 × 10 tap-tight S screws (P/N 5MBTPB4010TW++R)

Two (2) M3 × 6 bronze flat-head screws (P/N 7BB003306H)

One (1) M4 × 20 tap-tight S screw (P/N 7BB100420H)

One (1) M3 bronze nut (P/N 7BC1003055++H01)

One (1) M3 × 8 bronze binding screw (P/N B1B03080)

One (1) M4 × 30 tap-tight S screw (P/N B1B54300)

Five (5) M4 × 6 chrome TP screws (P/N B4A04060)

Two (2) M4 × 10 chrome TP screws (P/N B4A04100)

#### Procedure

1. Press the power key on the operation panel to off. Make sure that the power indicator and the memory indicator are off before turning off the main power switch. And then unplug the power cable from the wall outlet.
2. Fit the key counter socket assembly to the key counter retainer using the two screws and nut.
3. Fit the key counter mount to the key counter cover using the two screws, and attach the key counter retainer to the mount using the two screws.

Figure 1-2-16

4. Remove the scanner right cover and the upper right cover.
5. Cut out the aperture plate on the upper right cover using nippers.
6. Pass the connector of the machine through the aperture and refit the upper right cover.

Figure 1-2-17

7. Pass the connector of the machine through the aperture in the key counter cover retainer.
8. Insert the hook of the key counter cover retainer in the slit of the upper right cover.
9. Fit the key counter cover retainer to the machine using the M4 x 20 screw.
10. Refit the scanner right cover.

**Figure 1-2-18**

11. Insert the connector of the key counter signal cable into the connector of the machine.
12. Fit the key counter cover with the key counter socket assembly inserted to the key counter cover retainer using the M4 X 6 screw.
13. Insert the key counter into the key counter socket assembly.

**Figure 1-2-19**

14. Turn the main power switch on and enter the maintenance mode.
15. Run maintenance item U204 and select ON.
16. Exit the maintenance mode.
17. Check that the message requesting the key counter to be inserted is displayed on the touch panel when the key counter is pulled out.
18. Check that the counter counts up as prints are made.

## 1-2-4 Installing the expanded memory (option)

### Procedure

1. Press the power key on the operation panel to off. Make sure that the power indicator and the memory indicator are off before turning off the main power switch. And then unplug the power cable from the wall outlet.
2. Remove the screw and remove the memory slot cover.
3. Open clamps on both ends of the memory socket on the main PWB.
4. Insert the expanded memory into the memory socket so that the notch on the memory align with the corresponding protrusion in the slot.

The memory module is secured to the memory socket with the clamps.

5. Refit the memory slot cover.
6. Print a status page to check the memory expansion (See page 1-3-6).  
If memory expansion has been properly performed, information on the installed memory.

Figure 1-2-20

This page is intentionally left blank.

### 1-3-1 Maintenance mode

The machine is equipped with a maintenance function which can be used to maintain and service the machine.

#### (1) Executing a maintenance item

## (2) Maintenance modes item list

| Section                                               | Item No. | Content of maintenance item                                                                              | Initial setting*                    |
|-------------------------------------------------------|----------|----------------------------------------------------------------------------------------------------------|-------------------------------------|
| General                                               | U000     | Outputting an own-status report                                                                          | -                                   |
|                                                       | U001     | Exiting the maintenance mode                                                                             | -                                   |
|                                                       | U002     | Setting the factory default data                                                                         | -                                   |
|                                                       | U003     | Setting the service telephone number                                                                     | *****1                              |
|                                                       | U004     | Displaying the machine number                                                                            | -                                   |

| U000                 | <p><b>Outputting an own-status report</b></p> <p><b>Description</b><br/>Outputs lists of the current settings of the maintenance items, and paper jam and service call occurrences. Outputs the event log or service status page.<br/>Printing a report is disabled either when a job is remaining in the buffer or when [Pause All Print Jobs] is pressed to halt printing.</p> <p><b>Purpose</b><br/>To check the current setting of the maintenance items, or paper jam or service call occurrences. Before initializing or replacing the backup RAM, output a list of the current settings of the maintenance items to reenter the settings after initialization or replacement.</p> <p><b>Method</b></p> <ol style="list-style-type: none"> <li>Press the start key.</li> <li>Select the item to be output.</li> </ol> <table border="1"> <tr> <th>Display</th><th>Output list</th></tr> <tr> <td>MAINTENANCE</td><td>List of the current settings of the maintenance modes</td></tr> <tr> <td>EVENT LOG</td><td>Outputs the event log</td></tr> <tr> <td>SERVICE STATUS</td><td>Outputs the service status page</td></tr> </table> <ol style="list-style-type: none"> <li>Press the start key. The interrupt print mode is entered and a list is output.<br/>When A4/Letter paper is available, a report of this size is output. If not, specify the paper feed location.<br/>When output is complete, the screen for selecting an item is displayed.</li> </ol> <p><b>Event log</b></p> <p>The screenshot shows the 'Event Log' screen for an MFP. At the top, it displays 'Firmware version 2GR_2000.001.036' and '2006.04.17'. Below this, there are four main sections of logs:</p> <ul style="list-style-type: none"> <li><b>(3) Paper Jam Log:</b> A table with columns '#', 'Count.', and 'Event Descriptions'. It lists various jam events with counts and descriptions like '10.01.08.01.01'.</li> <li><b>(4) Service Call Log:</b> A table with columns '#', 'Count.', and 'Service Code'. It lists service call events with counts and codes like 'F0.0030'.</li> <li><b>(5) Maintenance Log:</b> A table with columns '#', 'Count.', and 'Item'. It lists maintenance events with counts and items like '1045571'.</li> <li><b>(6) Unknown toner Log:</b> A table with columns '#', 'Count.', and 'Item'. It lists unknown toner events with counts and items like '3454'.</li> <li><b>(7) Counter Log:</b> A table with columns for various counter items (J04:000 to J14:000) and their counts.</li> </ul> <p>A callout box highlights the event description '10.01.08.01.01' from the Paper Jam Log, with labels (a) through (e) corresponding to its fields: (a) 10, (b) 01, (c) 08, (d) 01, (e) 01.</p> | Display | Output list | MAINTENANCE | List of the current settings of the maintenance modes | EVENT LOG | Outputs the event log | SERVICE STATUS | Outputs the service status page |
| Display              | Output list                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |         |             |             |                                                       |           |                       |                |                                 |

| U021                 | <p><b>Initializing counters and mode settings</b></p> <p><b>Description</b><br/>Initializes all settings, except those pertinent to the type of machine, namely each counter, service call history and mode setting. Also initializes backup RAM according to region specification selected in maintenance item U252 Setting the destination.<br/>Refer to *2 of the maintenance mode item list about the item initialized.</p> <p><b>Purpose</b><br/>To return the machine settings to their factory default.</p> <p><b>Method</b></p> <ol style="list-style-type: none"> <li>1. Press the start key.</li> <li>2. Press [EXECUTE] on the touch panel.</li> <li>3. Press the start key. All data other than that for adjustments due to variations between machines is initialized based on the destination setting.</li> <li>4. Turn the main power switch off and on.</li> </ol> <p>An error code is displayed in case of an initialization error. Refer to the table of the error codes on P.1-3-17. When ERROR 09 occurred, turn main power switch off then on, format the hard disk using maintenance item U024, and execute initialization using maintenance item U021. For other errors occurred, turn main power switch off then on, and execute initialization using maintenance item U021.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |         |             |             |                                                        |         |                                            |    |                                            |         |             |      |                                     |               |                                |              |                                      |
| U022                 | <p><b>Initializing backup memory</b></p> <p><b>Description</b><br/>Initializes only the backup data for image processing.<br/>Also, initializes the settings with the system menu in order to restore default settings simultaneously when [MAIN+ENGINE] is selected.<br/>Reregister the fax settings since the settings are initialized when the optional fax kit is installed.</p> <p><b>Purpose</b><br/>To be executed as required.</p> <p><b>Caution</b><br/>Run the maintenance item U411 (Adjusting the scanner automatically) after initialization the backup data of scanner PWB or DP main PWB (see page 1-3-72).</p> <p><b>Method</b></p> <ol style="list-style-type: none"> <li>1. Refer to the table of the error codes on P.1-3-17. When ERROR 09 occurred, turn main power switch off then on, format the hard disk using maintenance item U024, and execute initialization using maintenance item U022. For other errors occurred, turn main power switch off then on, and execute initialization using maintenance item U022.</p> | Display | Description | MAIN+ENGINE | Initialize the backup data of main PWB and engine PWB. | SCANNER | Initialize the backup data of scanner PWB. | DP | Initialize the backup data of DP main PWB. | Display | Description | INCH | Inch (North America) specifications | EUROPE METRIC | Metric (Europe) specifications | ASIA PACIFIC | Metric (Asia Pacific) specifications |
